5. STACK BASED BUFFER OVERFLOW ATTACKS

DATE: 25/02/2026

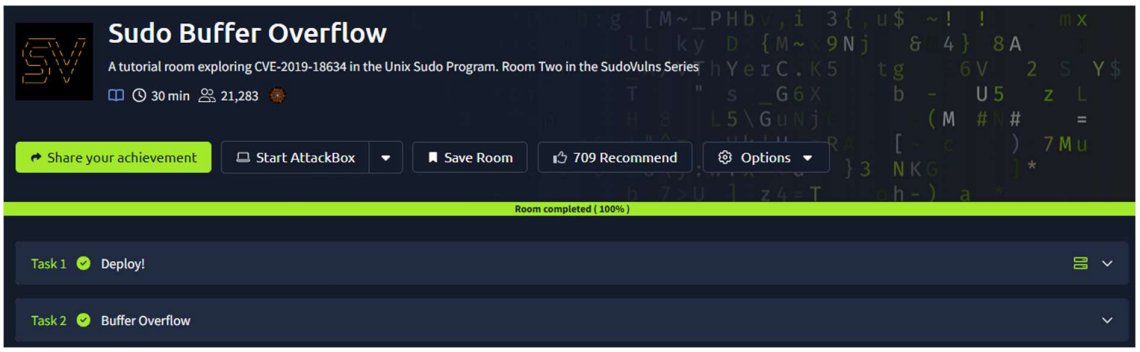
Aim:

To explore CVE-2019-18634 in the Unix Sudo Program.

Procedure:

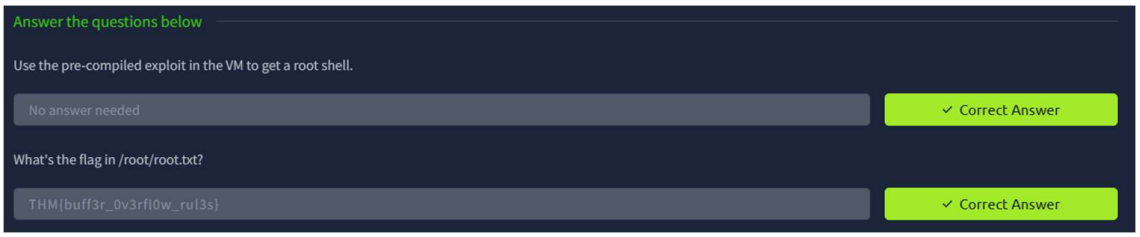
1. Log into TryHackMe and open the Sudo Buffer Overflow room.
2. Study the basics of buffer overflow vulnerabilities in Unix systems.
3. Understand the vulnerability CVE-2019-18634 in the Sudo program.
4. Analyze how improper input handling leads to memory overflow.
5. Explore the steps used to identify and exploit the vulnerability in a controlled environment.
6. Complete the tasks and answer the questions in the room.
7. Review mitigation techniques and confirm completion.

Tasks:



TASK 1 – Deploy!

TASK 2 – Buffer Overflow



```
tryhackme@sudo-bof: ~
tryhackme@sudo-bof:~$ ./exploit
[sudo] password for tryhackme:
Sorry, try again.
# whoami
root
# cd /root
# cat root.txt
THM{buff3r_0v3rfl0w_rul3s}
#
```

Result:

Thus the TryHackMe room Sudo Buffer Overflow was completed successfully.
